Prevalence of periodontal diseases amongst diabetic patients attending the diabetic clinic General Hospital ,Colombo.

MSc. (Community Dentistry) - 1992

D 166

The main objective of the study was to determine the prevalence and severity of periodontal diseases amongst diabetic patients in the age group of 35-54 years and, compare that with an age and sex matched healthy control group. However, no significant difference was found between periodontal disease and type of treatment; duration of diabetes; fasting blood sugar level.
