**Blood lead levels of traffic policeman in the city of Colombo.**

**MSc.(Community Medicine) - 2002**

**D 1027**

The study revealed no statistically significant difference in mean blood lead levels between traffic and non traffic policeman. Although, the mean blood lead level of traffic policemen was slightly higher than that of non-traffic policemen, a statically significant higher percentage who had other selected signs and symptoms of lead intoxication did not show any statically significant difference between two groups.
