

## **IL 31: FERTILITY PRESERVATION**

***Dr. Athula Kaluarachchi***

*Senior Lecturer, Faculty of Medicine, University of Colombo, Sri Lanka*

Retaining future fertility potential by both men and women are increasingly becoming an area of interest. The advancement of assisted reproductive techniques, development of new gamete and tissue cryopreservation methods have played a key role in giving hope to men and women who want future fertility. Females who face the possibility of premature or imminent ovarian failure due to aggressive regimens of chemical and/or radiological therapy or bone marrow transplantation, and females who wish to delay pregnancy due to various social reasons would be keen to preserve
