

# **Integrating IoT and Machine Learning for Efficient Pest Management in Greenhouses**

**A thesis submitted for the Degree of Master of  
Computer Science**

**M. S. Nirmala**

**University of Colombo School of Computing  
2024**

## Declaration

<b>Name of the student:</b> M. S. Nirmala
<b>Registration number:</b> 2020/MCS/060
<b>Name of the Degree Programme:</b> Master of Computer Science
<b>Project/Thesis title:</b> Integrating IoT and Machine Learning for Efficient Pest Management in Greenhouses

1. The project/thesis is my original work and has not been submitted previously for a degree at this or any other University/Institute. To the best of my knowledge, it does not contain any material published or written by another person, except as acknowledged in the text.
2. I understand what plagiarism is, the various types of plagiarism, how to avoid it, what my resources are, who can help me if I am unsure about a research or plagiarism issue, as well as what the consequences are at University of Colombo School of Computing (UCSC) for plagiarism.
3. I understand that ignorance is not an excuse for plagiarism and that I am responsible for clarifying, asking questions and utilizing all available resources in order to educate myself and prevent myself from plagiarizing.
4. I am also aware of the dangers of using online plagiarism checkers and sites that offer essays for sale. I understand that if I use these resources, I am solely responsible for the consequences of my actions.
5. I assure that any work I submit with my name on it will reflect my own ideas and effort. I will properly cite all material that is not my own.
6. I understand that there is no acceptable excuse for committing plagiarism and that doing so is a violation of the Student Code of Conduct.

## **ACKNOWLEDGEMENT**

I am grateful to my supervisor, Dr. Hiran Ekanayake, for his valuable advice, support, and encouragement in the course of this research project. It is impossible that this work could have appeared in this form without his expertise and insightful comments.

I would also like to thank friends and colleagues at the University of Colombo, School of Computing, for the guidance and friendship through which this stay was actually made very fruitful and enjoyable.

I would especially like to thank all my family and friends. They have stood with me through thick and thin and understood the conditions that relate to my study. This has been a motivating factor in my life.

Not to mention at all that the open-source community, especially developers of TensorFlow Lite and Firebase, really deserve the top level of appreciation. They are the ones whose tools put an incredible input into this system.

This is the same group of farmers and agricultural practitioners who may be the biggest motivational power for this research from its very inception. It also confirmed the sustainability of the practiced farming in a case at hand that results in creative pest problem-solving.

## ABSTRACT

This thesis proposes a novel design for a pest management system that increases agricultural productivity by integrating Internet of Things (IoT) technologies and Machine Learning (ML) methodologies. It describes the development of an innovative system to improve productivity in greenhouses through the use of IoT and ML. The system uses an economical and user-friendly mobile application for capturing plant images with a smartphone. These images are then processed with pre-trained TensorFlow Lite models to accurately classify pest infestations.

A custom-designed tripod, equipped with Arduino, Bluetooth module, servo motor, environmental sensors, and cameras, is used to capture images and data on humidity and temperature, enabling automated and comprehensive scanning of the plantation. The data, which include pest identifications with more than 90% confidence, are synced in real time with a Firebase Realtime Database.

Farmers can use the mobile application to select crops that require monitoring, enabling targeted pest management. A web application performs deep analytics, presenting insights through various charts on pest metrics, detection timelines, and the correlation of pest detections with environmental conditions and their impact on different crops. The system also provides custom pest control recommendations and real-time alerts, powered by Firebase Cloud Functions.

The developed system represents a significant advancement in precision agriculture, offering a scalable and efficient solution for pest management in greenhouses or home gardens, utilizing cutting-edge IoT and ML technologies.

## TABLE OF CONTENTS

<b>ACKNOWLEDGEMENT .....</b>	<b>ii</b>
<b>ABSTRACT .....</b>	<b>iii</b>
<b>TABLE OF CONTENTS .....</b>	<b>iv</b>
<b>LIST OF APPENDICES .....</b>	<b>vii</b>
<b>LIST OF FIGURES.....</b>	<b>viii</b>
<b>LIST OF TABLES.....</b>	<b>ix</b>
<b>CHAPTER 1.....</b>	<b>1</b>
<b>INTRODUCTION .....</b>	<b>1</b>
<b>1.1 Motivation .....</b>	<b>2</b>
<b>1.2 Statement of the problem.....</b>	<b>2</b>
<b>1.3 Research Aims and Objectives .....</b>	<b>3</b>
1.3.1 Aim .....	3
1.3.2 Objectives .....	3
<b>1.4 Scope .....</b>	<b>4</b>
<b>1.5 Structure of the Thesis .....</b>	<b>5</b>
<b>CHAPTER 2.....</b>	<b>7</b>
<b>LITERATURE REVIEW .....</b>	<b>7</b>
<b>2.1 Related Work .....</b>	<b>7</b>
2.1.1 Advancements in IoT for Agriculture .....	7
2.1.2 Deep Learning in Pest Detection.....	7
2.1.3 Comparative Studies in Machine Learning for Agriculture .....	8
2.1.4 Hyperspectral Imaging and Deep Learning for Crop Inspection .....	8
2.1.5 IoT and Deep Learning for Crop Spraying Systems .....	8
2.1.6 Integrated Pest Management (IPM) Strategies.....	8
<b>2.2 Research Gaps.....</b>	<b>8</b>
<b>CHAPTER 3.....</b>	<b>11</b>
<b>METHODOLOGY .....</b>	<b>11</b>
<b>3.1 Overview.....</b>	<b>11</b>
<b>3.2 Design Assumptions.....</b>	<b>11</b>
<b>3.3 Process Flow Diagram.....</b>	<b>12</b>
<b>3.4 Prototype Architecture.....</b>	<b>12</b>
<b>3.5 Algorithmic Design Details: Enhanced Explanation.....</b>	<b>13</b>
3.5.1 Selection of Algorithms for Model Training.....	13
3.5.2 Dataset Preparation and Augmentation .....	13
3.5.3 Training and Validation Process.....	14

3.5.4 Hyperparameter Optimization and Model Evaluation.....	14
<b>3.6 Android App Development .....</b>	<b>14</b>
3.6.1 Overview .....	14
3.6.2 Design and Implementation.....	14
<b>3.7 Custom Tripod Development .....</b>	<b>15</b>
3.7.1 Overview .....	15
3.7.2 Design and Construction .....	15
3.7.3 Integration with the Android App .....	15
<b>3.8 Web Application Development.....</b>	<b>16</b>
3.8.1 Overview .....	16
3.8.2 Design and Implementation.....	16
3.8.3 Testing and Deployment.....	17
<b>3.9 Architectural Diagram .....</b>	<b>18</b>
<b>CHAPTER 4.....</b>	<b>19</b>
<b>EVALUATION AND RESULTS .....</b>	<b>19</b>
<b>    4.1 Algorithm Selection Rationale.....</b>	<b>19</b>
<b>    4.2 Algorithm Evaluation.....</b>	<b>21</b>
<b>    4.3 Real World Data .....</b>	<b>22</b>
4.3.1 Data Collection Methodology .....	23
4.3.1.1 Aphids vs Algorithms Performance .....	23
4.3.1.2 Caterpillar vs Algorithms Performance .....	24
4.3.1.3 Grasshopper vs Algorithms Performance.....	25
4.3.1.4 Mealybug vs Algorithms Performance.....	26
4.3.1.5 Slug vs Algorithms Performance.....	27
4.3.1.6 Snail vs Algorithms Performance.....	28
4.3.1.7 Whitefly vs Algorithms Performance.....	29
4.3.2 Evaluation Metrics.....	30
4.3.3 Results Summary .....	30
4.3.4 Discussion.....	31
4.3.5 Implications for System Deployment .....	32
<b>    4.4 Web Application Evaluation.....</b>	<b>32</b>
4.4.1 User Interface and Functionality .....	33
4.4.2 Integration with the Pest Management System .....	36
4.4.3 Evaluation of Web Application Performance.....	37
