as the damage that ensues. Patient with PID were treated with Capsule Dabidulward 500mg twice daily orally for a total of 21 days. It was a single blind placebo controlled clinical trial. In total, 40 patients were treated for PID. The patients were screened and diagnosed as per revised CDC criteria for PID. Rates of clinical success for Capsule Dabidulward were comparable to those for the comparator regimen. Capsule Dabidulward was well tolerated. In conclusion, Capsule Dabidulward is clinically effective and safe in relieving the symptoms and signs of Pelvic Inflammatory Disease and hence can be successfully used in the management of PID. The test drug is also cost effective and can be easily available to the patient.

**Key words:** Capsule Dabidulward, Pelvic Inflammatory Disease, Chlamydia trachomatis, Neisseria gonorrhoea

### Greco Arabic Concept of Uterine Prolapse (*Nute Rehm*)

#### ABSTRACT

Genital prolapse in women is not a condition to modern times, modern diet or modern living. It is a distressing weakness that has probably been with us since those very early times when human being first adopted the upright posture. In *Unani* system of medicine, the concept of humoral theory was first proposed by Buqrat (Hippocrates). He states that if *akhlaat arba* [*dam*, *balgham*, *saфра* and *sauda*] are in a state of equilibrium, both quantitatively and qualitatively, health is restored. Any derangement in these *akhlaat* (humours) either quantitatively or qualitatively leads to disease. According to humoral concept it is *balgham ghaleez* or *balgham lazij* (thick phlegm) which are involved and dominated in *nutue rehm* (uterine prolapse). Hence the abnormal accumulation of these *balgham* in uterus causes weakness of uterine ligaments leading to uterine prolapse. Ibn Rushd states that anatomical disorders can occur in uterus, which causes disturbance in its function; as a result uterus becomes loose and displaced from its place. Renaissance, Benedettida Legnano was the first to use the terms cervix, perineum and procidentia. Ibn Sina (Avicenna) has very carefully discussed about uterine prolapsed during the renaissance, diagnosis was made and several changes may altered the traditional system.

**Keywords:** Unani medicine; Humoral theory; Uterine prolapsed; *akhlaat arba*

### Reinforcement Unani Medicine under Mainstreaming of AYUSH - Scope and Prospects

#### ABSTRACT

The Indian Systems of Medicine including Ayurveda, Siddha, Unani, Yoga and Naturopathy are an integral part of Indian medical culture and tradition since earliest time in serving and catering the medical needs of a large segment of the population of our country. During last few decades the use of these systems has expanded globally and gained popularity. They have not only continued to be used for primary health care by poor and developing countries, but are used with conventional health care system (allopathic medicine). India is such a country where Indigenous system of medicine is not only being practiced and taught but is given due importance in the planning sector of health as well. The Unani System of Medicine is one among such indigenous systems of medicine practiced in India. Since Independence, the Govt.of India has adopted different policies for improvement of health of the nation, among these the integration of AYUSH and Mainstreaming AYUSH in health system of India is the
